

1. Requirement Analysis – Customer Journey Map

Customer Journey Map

The Customer Journey Map explains how a bank employee or customer interacts with the Credit Card Approval Prediction System.

Stage 1: Application Submission

The customer fills out the credit card application form.

Personal, financial, and employment details are entered.

Stage 2: Data Collection

The system collects the submitted information.

Required documents are verified and stored.

Stage 3: Data Processing

The input data is cleaned and preprocessed.

Missing values and invalid entries are handled.

Stage 4: Prediction

The trained Machine Learning model analyzes the customer's information.

The system predicts whether the application should be approved or rejected.

Stage 5: Result Display

The approval status is displayed to the bank officer.

The decision can be used for further verification before final approval.

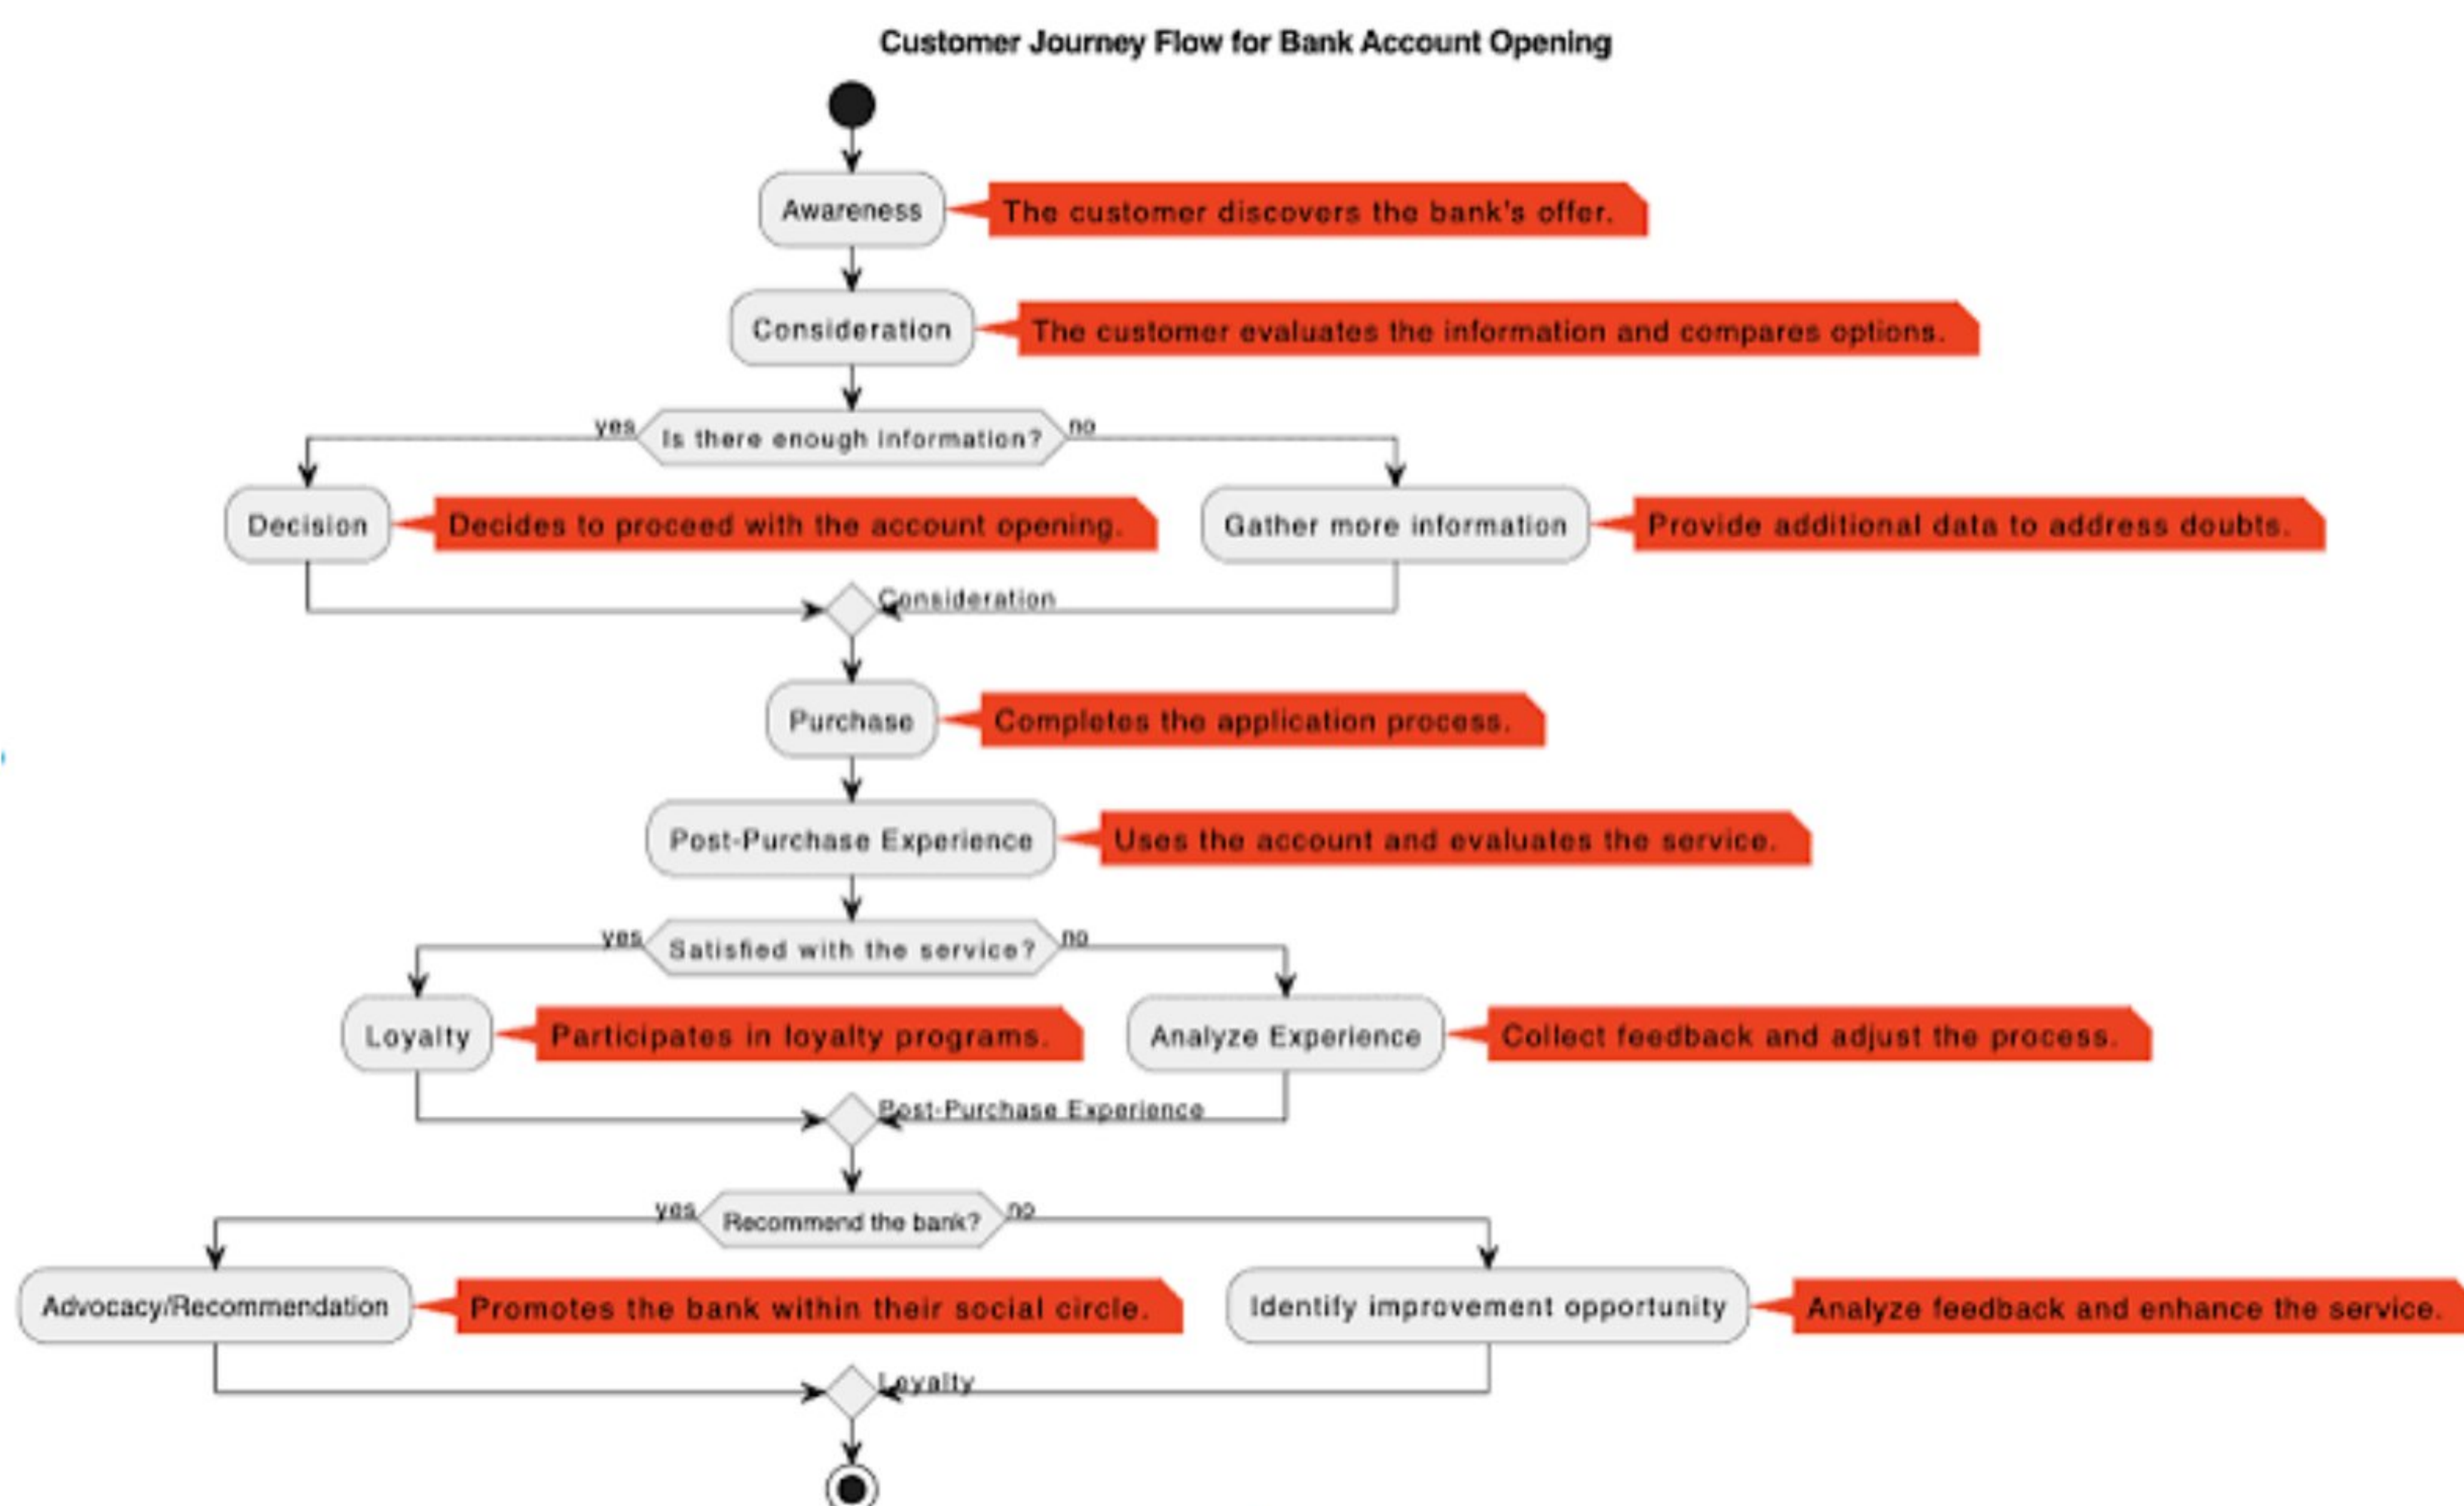

Benefits

Faster processing of applications.

Reduced manual effort.

Accurate and consistent decision-making.

Improved customer satisfaction.

Customer journey map for banks
