

Empathy Map Canvas

Project: Credit Card Approval Prediction

Section Content

SAYS	"I need quick credit card approval." "The process should be simple and transparent." "I want a fair decision based on my eligibility."
THINKS	"Will my application be approved?" "Is my income sufficient?" "Will my credit history affect the decision?"
DOES	Fills out the application form. Uploads required documents. Checks application status. Waits for the approval result.
FEELS	Excited about getting a credit card. Worried about rejection. Needs a fast and accurate decision. Expects a secure and reliable process.
PAINS	Long approval time. Manual verification delays. Lack of transparency. Possibility of human error.
GAINS	Faster approval process. Accurate prediction. Reduced waiting time. Fair and consistent decisions. Better customer experience.

Brainstorming Ideas

Main Idea

Develop a machine learning model that predicts whether a credit card application should be approved or rejected based on applicant details.

Possible Features

- Applicant Age
- Gender
- Income
- Occupation
- Family Members
- Education
- Housing Type

- Employment Status
- Credit History
- Loan Status

Technologies

- Python
- Pandas
- NumPy
- Scikit-learn
- XGBoost
- Flask
- HTML
- CSS
- GitHub

Expected Outcome

- High prediction accuracy
 - Reduced manual work
 - Faster approval process
 - Improved customer satisfaction
 - Better risk management
-
