Introduction

- ▶ Machine learning system to predict credit card approval using applicant information.
- ▶ Credit cards are widely used for financial transactions. Banks receive a large number of applications every day. Manually reviewing each application is time-consuming and may lead to inconsistent decisions.
- ▶ This project uses Machine Learning to automatically predict whether a credit card application should be approved or rejected based on applicant information.

Problem Statement

- Manual approval is slow
 - Human errors
 - Need faster, consistent decisions
- ▶ Manual approval process is slow.
 - ▶ Human errors may occur.
 - ▶ Large number of applications.
 - ▶ Risk of approving ineligible applicants.
 - ▶ Time-consuming verification process.

Objectives

Predict approval
Reduce manual work
Improve accuracyAutomate the
approval process.

Predict approval status
accurately.

Reduce manual effort.

Improve decision-making.

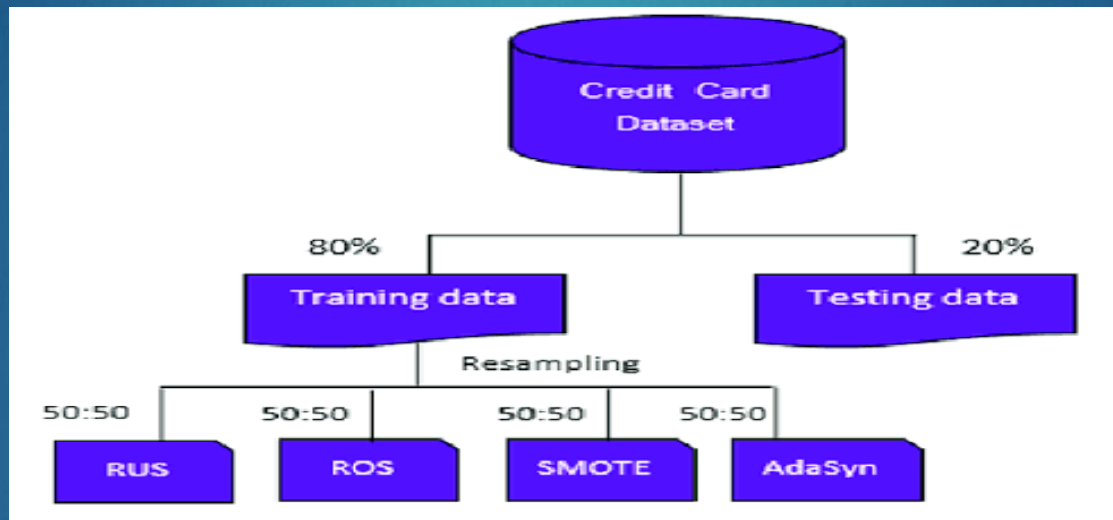

Provide faster results.

Technology Stack

- ▶ Python
- Flask
- HTML/CSS
- Pandas
- Scikit-learn
- XGBoost
- GitHub

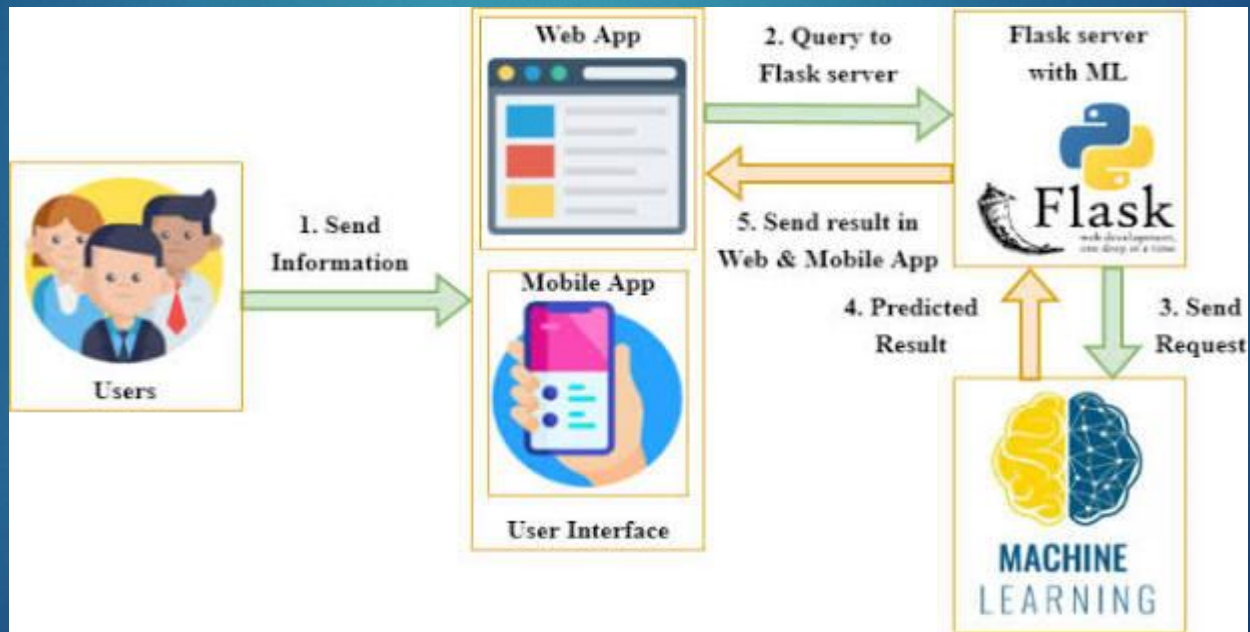

System Workflow

- Dataset → Preprocessing → Model Training → Prediction → Flask Web App

Architecture

- User → Web App → Flask → ML Model → Prediction Result

Results

- ▶ • Fast prediction
- Automated process
- Improved consistency

Future Scope

- ▶ • Cloud deployment
- Mobile app
- Bank API integration

Thank You
